

What is a hearing loop?

Hearing Loops allow people who wear hearing aids to directly receive the sound from the church's PA system in their own hearing aids without having to pick up a separate listening device.

Do you use hearing aids?

Find out if your hearing aids have a wireless receiver called a T-coil or Telecoil built in. If you do, you will be able to benefit from the hearing loop in our church. The T-coil program is accessed by pushing a button on a hearing aid. This T-coil program has to be activated by your audiologist. Talk to your audiologist to find out if your instruments can have both a T (no background noise pick up) and an MT program (blended microphone & T-coil program) for improved hearing at church.

Personal Hearing Assist Receivers are also available at First Congregational.
